

ConsultantAI Match

October 2025

User stories

1. Job Posting

- As a RECRUITER I want to create/ delete/ modify (CRUD) an assignment so that I can use it in the 'match base'
- As a RECRUITER I want to look for consultants so that I can check who is fit with score $> Z\%$

User stories

2. Consultant Collection

As a CONSULTANT I want to be able to add a CV of a consultant so that I can use it in the 'match base'

As a CONSULTANT I want to be able to read a CV of a consultant so that I can check what is in the 'match base'

As a CONSULTANT I want to be able to modify a CV of a consultant so that I can have correct information in the 'match base'

As a CONSULTANT I want to be able to remove a CV of a consultant so that it will not be used in the 'match base'

A solution for 'match base'

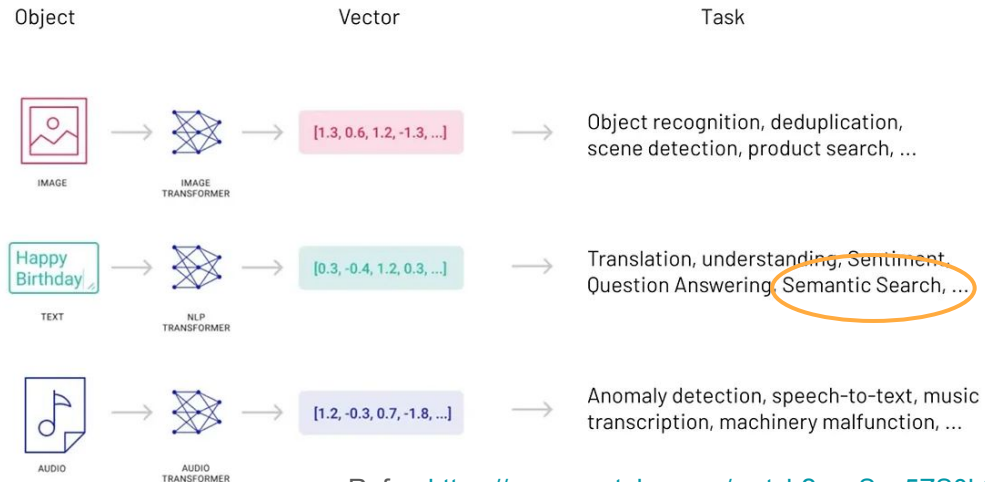

Step 1: Résumé & Assignment Parsing

- The system automatically **parses** (extracts text from) your **résumé** to identify:
 - Name, contact details
 - Work experience
 - Education
 - Skills and certifications
 - Available time
 - Need to define more...
- It converts CV(s) into structured fields (so recruiters can search and filter).
- The system automatically **parses** (extracts text from) your **Assignment** to identify:
 - Start date
 - Description
 - Duration
 - Need to define more...

A solution for 'match base'

Step 2: Keyword Screening

- The system may **filter or rank** candidates based on keywords or criteria, with score $> Z\%$ set by the recruiter.
- Implementing the AI to understand and represent the meaning of data in a numerical vector - **An embedding model**
 - An assignment (description, duration) into a vector
 - A criteria in a CV (Work experience, Available time) into a vector
 - Comparison of 2 vectors and score the results using metrics such as **Euclidean distance, cosine similarity, or dot product**

A solution for 'match base'

Step 3: Recruiter Review

- Explain why a certain consultant is matched with a certain assignment
 - Implementing **Generative Model**
 - Takes vector representations (embeddings) as input to generate human-like explanation.
- Recruiters open a candidate profile screen
 - Adding notes or ratings

Architecture - Draft

Tech Stack Suggestions

Layer	Tool
Parsing	Python (resume-parser / Textract)
AI Embeddings	Python/ Golang (call to OpenAI embeddings APIs or FAISS)
Vector Storage	FAISS / MySQL / Others
Backend	☐ Go + Gin + GORM + MySQL. ☐ Python + Django + MySQL
Frontend	React, Angular, Vue.js
Orchestration	☐ REST APIs between Go and AI service + Go and frontend ☐ REST APIs between AI service and frontend

Thank you
